

**ABSORBENT GARMENT TAB HAVING
ELASTICITY ZONES**

ABSTRACT

A fastener tab is provided for an absorbent garment having longitudinally opposite waist regions when laid flat. The fastener tab has a first elastic region for attaching to one of the waist regions of the garment and having a first stretch resistance, a dead zone adjacent to the first elastic region, a second elastic region adjacent to the dead zone and having a second stretch resistance, and a gripping zone attached to the second elastic region. The dead zone has substantially more stretch resistance than the first and second elastic regions, and the first stretch resistance is at least as great as the second stretch resistance.
